Helping people to love their job

## SOME COMPANIES ARE PROUD TO MASTER COMPLEX PROCEDURES UNDER THE MOST DIFFICULT OF MARKET CONDITIONS ...

### Workable workspaces

- Do what the customer values and nothing else
- Simplify your success chances: remove anything from each work place, which is not required to perform the job
- Invest in the right tools for the job and arrange them ergonomically
- Implement good ideas as soon as possible.  
Correct any issues immediately as a priority
- No System is perfect: constantly challenge your boundaries
- Real flexibility costs neither time nor money

### Teams consist of people, not robots

- Get your team involved, meet daily and implement their ideas first
- Simple and effective is always better than complex or impressive
- Assumptions are worthless:  
Base your decisions on facts and figures
- Integrity is not a one-way street:  
Be fair to your team and expect the same in return
- Never forget the people on the shop floor are building the value of your company
- Customers are human too:  
Expect nothing more than approximate demand forecasts

**... profitable companies are proud to have simplified their processes and improved their market value – that's Lean!**
